

Two holes can be punched simultaneously in documents up to 50mm thick.

AUTO PUNCH
P-2005

The P-2005 AUTO PUNCH is microcomputer-controlled to automatically punch two holes at a time, 8cm apart, in documents up to 50mm thick. It requires only six seconds to punch a pair of holes and can be operated continuously.

Self Centering Table

Both of the table's side guides slide simultaneously to adjust to paper up to 15"×11" in size, facilitating center alignment.

(Actual size)

Securely Punch Documents up to 50mm Thick!

The P-2005 AUTO PUNCH allows you to easily punch through thick conference handouts or piles of documents.

The specially machined drill bit has excellent durability. (The drill bit is not allowed to be ground down.)

Intelligent Enough to Stop Automatically if Any Problem Occurs!

When an overload is detected, the P-2005 AUTO PUNCH automatically stops operation and flashes a red light.

Should this happen, press the reset switch and check the condition of the drill bits and other parts. If the housing is not properly remounted, the start switch remains inoperative.
